

How to Take a Blood Pressure

THIS HOME PROCEDURE WILL TELL YOU

1. What you will need.
2. How to take your blood pressure.
3. How to keep a record of blood pressure.
4. What else you need to know.

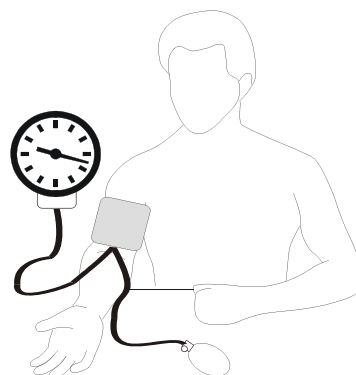

WHAT WILL I NEED?

1. Blood pressure machine (sphygmomanometer)
2. Blood pressure cuff
3. Stethoscope
4. Pencil and paper

HOW DO I TAKE MY BLOOD PRESSURE?

- Sit down in front of a table.
- Put your arm on the table with the palm of your hand up.
- Roll your sleeve up.
- Wrap the cuff around your arm about 1" above the bend of your elbow.
- The cuff should be snug but not tight. You should be able to slide 2 fingers between the cuff and your arm.
- Place the gauge where you can easily see it.

- Using two fingers, find your pulse on the inside of your arm. Place the stethoscope's diaphragm over this area.

Diaphragm

- Put the stethoscope in your ears.
- Place the dial where you can see it. Make sure it won't move when you pump up the cuff.

- Tighten the valve (not too tight) by turning clockwise.

Valve

- Pump the bulb fast to inflate the cuff.

- Keep your eye on the dial. Turn the screw counter clockwise to let the air out slowly.

- Watch the dial and listen for the 1st beat. Remember the number on the dial when you heard the 1st beat. This is the **systolic** pressure.

- Next, listen for the last sound. Remember the number on the dial at the time of the last sound. This is the **diastolic** pressure.

- Let the air out of the cuff.

- Remove the cuff.

- Write down the 2 numbers. Make sure to write the date and time.

HOW SHOULD I KEEP A RECORD:

1. Keep a daily written record including the **date, time, and your blood pressure.**
2. Take your blood pressure record with you to clinics or to your doctor.

DAILY RECORD		
Date	Time	Systolic/Diastolic
4/10/03	10:00 am	120/80
4/11/03	10:30 am	135/78
4/12/03	9:45 am	125/74

WHAT ELSE DO I NEED TO KNOW?

1. Have a nurse check your equipment once a year.
2. Keep your blood pressure equipment safe in a drawer. Squeeze all the air out of the cuff before putting it away.
3. Take your blood pressure in the **same arm** each time.
4. If your blood pressure is **greater** than _____, **call your physician or go to the nearest emergency room.**
